

ENERGY and NATURE

Our world is in the midst of a climate crisis. To help solve it, we need to rapidly transform our global energy system from one reliant on fossil fuels, to one powered by renewable energy.

Changing our energy system is crucial to reduce emissions and protect people and nature from the worst impacts of climate change.

Renewables are a clean source of energy and represent the best option, but we are also in the middle of a nature crisis, and the impact of renewables on biodiversity must be carefully managed.

The goal of the **Coalition Linking Energy and Nature for action** (CLEANaction) is to ensure that the impact on nature by clean energy systems is fully accounted for prior to any installation. CLEANaction highlights the need to carefully assess the full impact of renewable energy projects, and pushes for a renewable energy transition that prioritizes those options causing the least damage to nature.

CLEANaction focus

CLEANaction brings together all those aware of the link between energy and nature to work collaboratively in spreading knowledge and driving **solution-oriented approaches and results**. This enables best practice solutions, appropriate siting, bridging data gaps, knowledge sharing, promoting the sustainable use of all forms of renewable energy, and more.

CLEANaction members engage in information-sharing through **dialogue, working groups and other knowledge-exchange opportunities** that promote increased adoption of renewable energies while identifying and minimizing any negative impact caused by these, **in any part of the world**.

Also, CLEANaction leverages the collective skills and capacity of all members, **providing a platform that enables strong partnerships across sectors** that allow for joint initiatives, common narratives, and stronger cross-sectoral collaboration in the development of low-impact renewable energies.

Why join CLEANaction

By joining CLEANaction you will **become part of an international and multidisciplinary network** that channels best practices and solutions to ensure nature's protection during the energy transition.

CLEANaction provides a forum for dialogue and discussion, where information and experiences are shared, collective knowledge of the links between energy and nature are exchanged, and solutions are developed and implemented. As a result, **strong sectoral and cross-sectoral partnerships can be formed** under the Coalition to ensure that renewable energies have the least possible impact on people and nature.

At CLEANaction **you will be at the forefront of alternatives, approaches, practices and solutions** that ensure the urgent global need for new renewable energy can be delivered without irrevocable damage to nature. You will have access to the latest findings that may impact your organization, the opportunity to **interact with leaders in the field**, and the ability to play **a participatory role** in the launch of joint activities, events, advocacy and media outreach that will **influence the global response** to the pending energy-nature crisis.
